With our low-cost Cyber Services Bundle

From only £395*

*12 month subscription, subject to VAT

High-end, full featured SME cyber security made affordable...

As an SME business, you need to control costs but you recognise that protecting your business from online threats, data breaches and other forms of attack is increasingly important.

Now, with P&C Communications SME Cyber Services Bundle, you can protect your business with the kind of security features and support you may have only thought was accessible to corporate level companies.

How it works:

Included in the package, we provide a full range of support including an initial **Vulnerability Assessment** of up 16 public IP Addresses. Vulnerability Assessment, is a process that defines, identifies, and classifies the security-holes that may be present in your business systems so is an invaluable tool to identify the potential weaknesses and entry points for potential future attacks.

Included in your package is **Cyber Essentials Certification** - CE is a government backed programme to protect SME businesses from cyber threats. 33% of small businesses and 65% of large businesses reported a cyber breach or attack in the past 12 months. Having Cyber Essentials certification will mean your business has good basic protections in place to avoid the many cyber threats out there. We will guide your business to getting all of the necessary protections in place so your business can display the Cyber Essentials logo as an accredited business.

CYBER ESSENTIALS

Protect **your** business cyber assets
with our low-cost cyber services bundle

A package that includes everything you need…

As well as your Vulnerability Assessment and Cyber Essentials protection, as part of the package you also get access to the **PGI Explore Online Learning Site**. This invaluable online resource allows access onto a portal with content around security including papers, webinars to provide the latest information and good practices.

And much more…

Our SME Cyber Services Bundle is expandable to your specific requirements, via a range of modules that can be purchased in addition to your core package. This means that we can tailor cyber security features from a customised menu, everything you need to protect your business - nothing you don't.

Penetration Testing Option

Penetration testing (pen testing), or ethical hacking, as it is commonly called, is a process which involves an attack on a computer system with the intention of finding security weaknesses. As a component of a full security audit, pen tests emulate an actual hacking of an organization's network(s) by certified technicians.

Cyber Telephone Support

This option gives you up to four hours of telephone support with our cyber security experts, enabling you to get real-time assistance and advice if you feel you have been hacked, or suffer any other cyber security threat.

A partnership that affords ultimate protection for your business

Our SME Cyber Services Bundle is brought to you by P&C, working
in close partnership with our strategic partners, Protection Group International.
